QMC

Integrated **Submetering**

The New Standard in Water Submetering

UNICOcoder Series: All the features you want at a lower total price.

The current submetering market is in crisis. Businesses are installing low quality meters that require repairs in under 2 years after installation.
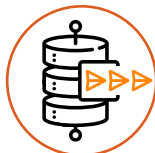

Introducing the UNICOcoder series from QMC: We provide plug and play meters with advanced features that come with premium construction quality at a lower total price. Trust QMC to help your next project.

UnicoCoder Features

Encoded Registers

Our UNICOcoders output encoded data rather than pulse data. This allows our meter data to be secure and pinpoint accurate, resulting in better energy management as well as reducing lost revenue during collections.

Premium Construction Materials

Unlike other water meters on the market today, UNICOcoders are made with an all-brass construction. This leads to a much longer period before repairs or re-installations are required.

Lower Total Cost of Ownership

Installing a higher quality meter in the beginning saves money in the long term. UNICOcoders are rated for an average 15 year service life, compared to the industry average of 5 years.

Full Regulatory Approval

Our UNICOcoders have passed all regulatory demands with flying colors: CTEP, NTEP, as well as NSF-61. Your peace of mind is guaranteed when inspectors or energy auditors inspect your property or portfolio.

Plug and Play

Our dedicated meter technicians test and seal all UNICOcoders in our accredited labs. This means we manage the regulatory process and paperwork for you, so you can focus on what's important for your business.

QMC's UNICOcoders are perfect for multi-family, commercial and mixed use sites. Contact us today.
