

Integrated Submetering    

Complete Meter Data Integrator

Manage your meter data across all platforms in one place quickly and reliably.

MeterConnex™ is the perfect data integrator for submetering and residential billing companies. Our platform can collect and analyze data from all popular submetering and AMI systems in one convenient place, streamlining your billing and collections process.

MeterConnex is also multi-utility, providing you the same level of service across all utility types: Water, Electricity, Gas, and Heating & Cooling.

METERCONNEX™ Features

Connect and Read Any Utility Type

- Read and analyze meter data from all utility types in a building, such as Water, Electricity, Gas, and Heating & Cooling
- Easily see total energy performance of any site
- Find and fix building problems early

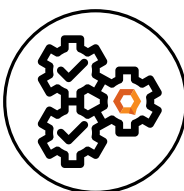

Integrate With Any Existing System

- Export out any meter data to your desired building management system
- Export customized reports, CSV files, and downloadable data formats
- Onboard quickly into your workflow, reducing downtime spent compiling data from different manufacturer's software

Connect and Read Any Meter

- No proprietary restrictions
- Simply connect your existing meters alongside QMC's meters
- View all meters on a property in one place, on any web browser

Meets all Regulatory & Benchmarking Requirements

- Approved for all regulatory and benchmarking needs
- Cross-compatible and can report to US Green Building Council (USGBC) and ENERGY STAR® Portfolio Manager for LEED certification or general benchmarking

METERCONNEX™ Can Integrate With:

⇔ **METERCONNEX™**

Case Study 1 - Software Integration

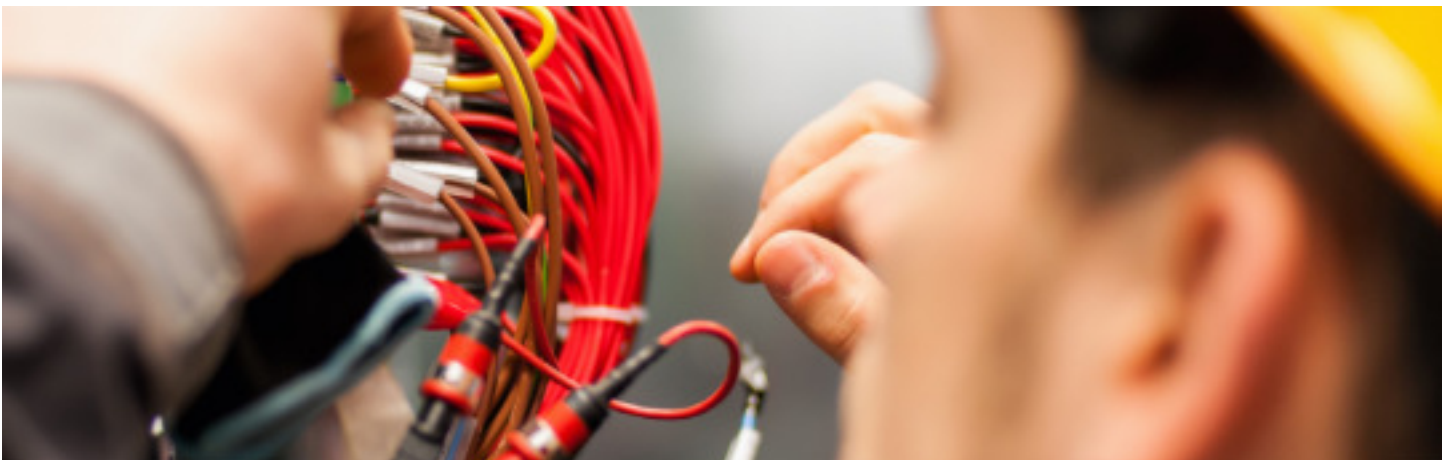

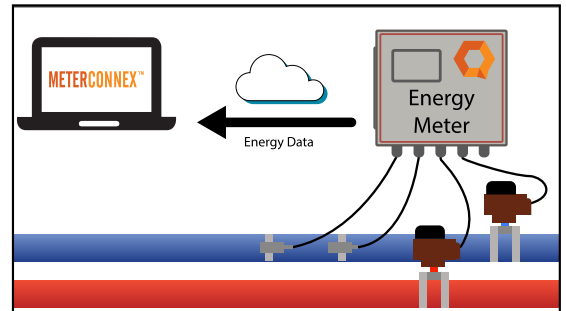

Project: QMC assisted a billing company who was struggling to download data from an existing Quadlogic Controls metering system.

QMC's Meterconnex was able to seamlessly connect with the existing system and export out the relevant data quickly and efficiently, reducing the amount of on site technician time, potential for lost revenues and potential downtime.

Case Study 2 - Hardware Integration

Project: A billing company struggled to remotely download data from an existing Intellimeter system. Many technician hours were spent on site to manually read the meters. QMC was able to provide the client with an effective hardware solution that complemented MeterConnex and the existing Intellimeter solution, saving the client huge costs on removing and installing a completely new system.

After the hardware implementation, MeterConnex was able to reliably capture and export data to where it needed to go.

Trust QMC to Get The Job Done Right.

With over 25 years working in the submetering industry, we know that being able to access your data quickly through hardware and software integrations can help streamline your billing and collections process. Trust QMC to help you achieve better building performance, utility conservation and reach your sustainability goals.

**MeterConnex is the Ideal Meter Reporting Software for Your Project.
