

Integrated Submetering    

Mobile Home Park Submetering

Effectively manage all water and electricity consumption on site

QMC helps Mobile Home, RV Park and Trailer Park owners effectively monitor and measure their resident's water and electricity use through submetering.

Install a submetering system that brings your utility consumption under control through intelligent monitoring.

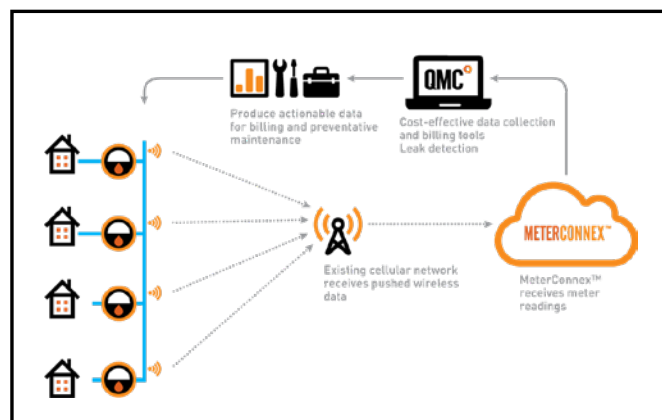

The Problem

Many mobile home communities across North America receive a single water or electricity bill for an entire site. Without submetering, the site or property manager must spread the total cost to each resident individually. This unfairly benefits heavy users, and increases a site's total consumption, which equals to high monthly billing.

The Solution

QMC installs a world class submetering system with an online reporting program that collects meter data remotely and monitors your site for water loss mitigation.

We Offer World Class Meters

- Our UNICOCoder line of water meters are NSF-61 certified for safe water consumption
- Pit-rated for outdoor installations and submersible
- Meter data is encoded for accuracy and precision
- Easy wireless installation cuts out the need for costly wiring
- Strong brass body construction, leading to 15 year lifespan
- Can be installed horizontally or vertically with no issues
- High density electrical meters lowers costs per access point

Web-based Meter Reporting

METERCONNEX™

- One convenient location to view all your meter data
- Connects and reads any utility type: Water, Electricity and Gas
- Connects to almost any brand of submeter on the market today
- Cloud-based calculations happen on the backend to detect leaks or other problems on site as they occur
- Integrate with any existing systems for billing or accounting purposes
